

In the Claims (Clean copy as amended)

1. (Amended) A polyimide molding of an aromatic polyimide resin, comprising a wall defining an opening at one end and closed at an opposite end, and having a depth therebetween, wherein the wall thickness is at most 0.5 mm, wherein said molding is further defined by at least one of the following:

*b2*  
a ratio of depth to opening is of at least 0.7; and

a longest major axis is of at least 150 mm in length with a depth of at least 0.5 mm.

2. (Amended) The polyimide molding as claimed in claim 1, wherein the wall thickness falls between 0.001 and 0.3 mm, and;

wherein said molding is further defined by at least one of the following:

a ratio of depth to opening falls between 0.7 and 5.0 ; and

the longest major axis falls between 150 and 10000 mm in length with a depth falling between 0.2 and 8000 mm.

3. (Amended) The polyimide molding as claimed in claim 1, wherein the wall thickness falls between 0.01 and 0.2 mm, and wherein said molding is further defined by at least one of the following:

a ratio of depth to opening falls between 1.0 and 3.0; and

the longest major axis falls between 200 and 5000 mm in length with a depth falling between 1.0 and 2000 mm.

4. (Amended) The polyimide molding of any one of the claims 1 to 3, wherein the aromatic polyimide is a thermoplastic aromatic polyimide.

*A1  
contd*

5. (Amended) The polyimide molding as claimed in claim 4, wherein the thermoplastic polyimide has a glass transition temperature falling between 200 and 350° and has a degree of elongation at break of from 50 to 2000% at its glass transition temperature.
